

# KIDS GUITAR LESSON 2

## Lesson Plan

Make sure the guitar is in tune

Spend some time making sure that the child can move between the G and Em chords covered during the previous session (this lesson can be a good time to introduce the "full" two finger Em chord shape)

Show the child how to form and strum (once) the C chord shape

Show your student how to form the D chord

Have them move between the C and D shapes in their own time

Introduce a count of 1-2-3-4 before each chord is strummed

Play along to a backing track

If the student picks the chords up quickly then increase the complexity and duration of (down-up-down-up) right hand strumming patterns

Encourage the student to practice before the next session and let them know what comes next
